PETITION TO MAKE SPECIAL
AND
STATEMENT & DISCUSSION REGARDING PREEXAMINATION SEARCH
AND MOST RELEVANT UNCOVERED REFERENCES IN SUPPORT

Sir:

Applicant hereby submits this Petition to Make Special to request an Acceleration of the Examination of this application, under 37 CFR § 1.102(d) according to MPEP §708.02(VIII). A check in the amount of \$130.00 for the petition fee under 37 CFR § 1.17(h) is enclosed, and Applicant provides the attached Statement and Discussion. Note that copies of cited U.S. references were not included, according to current practice, but are listed on the enclosed IDS.

I hereby certify that this correspondence is being deposited with the United States Postal Service as first class mail in an envelope addressed to: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450 on the date indicated below.	
 Signature of Attorney	Robert P. Bodi Name of Attorney for Applicant(s) October 11, 2005 Date

The PTO did not receive the following listed item(s).

No check.

**STATEMENT & DISCUSSION REGARDING PREEXAMINATION SEARCH,
AND MOST RELEVANT UNCOVERED REFERENCES IN SUPPORT**

PREEXAMINATION SEARCH

A preexamination search was conducted in compliance with MPEP §708.02, VIII. Special Examining Procedure For Certain New Applications – Accelerated Examination.

An initial search by the European Patent Office of the co-pending application, EP 1443798 A3, is attached hereto. Attached hereto is European Publication No. EP 1443798 A2, which was also examined in the above search. Note that the independent claim of the EPO application is essentially identical to the claim of the subject U.S. application. The EPO search identified two A references, one of which was also a D reference. Accordingly, the European Search report did not identify any references relevant to the patentability of the claims of this application.

A second search of U.S. patents and patent applications, conducted by the undersigned attorney on June 16, 2005 and updated on September 13, 2005, covered the following USPTO Patent Classifications:

Class 381, Electrical audio signal processing systems and devices, was searched via the following subclasses:

The following subclasses of subclass 312: HEARING AIDS, ELECTRICAL, were searched in detail:

- Subclass 313: Directional (181 references reviewed); and
- Subclass 322: Specified casing or housing; subclass 330: Hook over ear (217 references reviewed);

Subclass 92: DIRECTIVE CIRCUITS FOR MICROPHONES was searched restricted to those references having the keywords "hearing aid" or the phrase "hearing device". (69 references reviewed)

The following subclasses of class 367: COMMUNICATIONS, ELECTRICAL: ACOUSTIC WAVE SYSTEMS AND DEVICES, subclass 118: DISTANCE OR DIRECTION FINDING, were searched with the search restricted to patents that were either also classified in class 381, or patents that contained either the phrase "hearing aid" or the phrase "hearing device" (35 references reviewed):

BEST AVAILABLE COPY

- Subclass 119: With beam forming, scanning, or focusing, subclass 121: By electrical means;
- Subclass 124: By combining or comparing signals; further, the following subclasses of subclass 124 were also searched:
 - Subclass 125: Phase comparison and/or correlation;
 - Subclass 126: Addition or subtraction;
- Subclass 129: With plurality of transducers

DISCUSSION OF MOST RELEVANT REFERENCE(S)

Each of the enclosed references is cited in the IDS. However, the party reviewing the search has determined that none of the uncovered references are relevant to the subject invention, for the reasons set out below.

The present invention, as set forth in claim 1, the only independent claim, is directed to a behind the ear hearing device having at least two microphones for detecting acoustical signals and a beam former unit having transfer characteristics of amplification that are dependent on both "the direction with which said acoustical signals impinge on said microphones" (lines 18-20) and on the "frequency of said acoustic signals" (lines 20-21) with the beam former having the following features:

a substantially constant amplification independent of said direction of impinging at said frequency of 1 kHz,

and

For said direction being 45° [with 0° being the direction faced by an individual wearing the device and 90° outwards from the ear of the user], a larger amplification than for said direction being 135° at said frequency of 5 kHz.

None of the references listed above teach or suggest any beam former unit having the cited characteristics.

It is noted that a number of references cited in the IDS teach the use of multiple microphones to form directional characteristics that are of the cardioid, hyper-cardioid, or some similar pattern. See, for example, U.S. Pat. Nos. 5, 473,701 (Fig. 2), and U.S. Pat. App. No. 2003/0142836 (Figs. 4-9). However, no reference suggested directivity where amplification at 45° would differ from amplification at 135° at one frequency, but not at another.

BEST AVAILABLE COPY

Furthermore, at least one reference taught that microphone sensitivity may vary as a function of frequency. See, for example, U.S. Pat. App. No. 2003/0142836 (Fig. 11). Another reference taught that signal processing can also result in frequency sensitivity. See U.S. Pat. App. No. 2005/0058312 (where it is discussed that filtering and/or pre-processing might be used to compensate for frequency differences, see paragraph [0030]).

However, no reference was found that taught anything similar to the characteristics cited above, namely that at 1kHz, there would be no directivity impact on amplification, whereas at 5kHz, there would be a larger amplification for signals impinging at 45° than at 135°. This teaching is not found in any of the cited references. Thus, claim 1 is patentable over the prior art searched.

The remaining claims are dependent, directly or indirectly, on one of the independent claims discussed above, and are thus patentable over the references based on that dependency.

Accordingly, because all of the relevant classes have been searched without finding any relevant references, and because a search in the European Patent Office has similarly found no relevant references, the claims are patentable over the prior art.

If there are any additional fees resulting from this communication, please charge same to our Deposit Account No. 16-0820, our Order No. 34835.

Respectfully submitted,

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

Applicant respectfully inquires as to the status of the above-identified application. The application was filed February 10, 2004 and applicant's attorney has not received an Examiner's communication from the Patent Office since that filing date.

Also on October 11, 2005, applicant submitted a "Petition To Make Special And Statement & Discussion Regarding Preexamination Search And Most Relevant Uncovered References In Support," as well as an Information Disclosure Statement to be filed in the above-referenced patent application. A recent search of PAIR does not show these two submissions as being entered into the file history of this case.

I hereby certify that this correspondence is being transmitted by facsimile to the Commissioner for Patents, Washington D.C. 20231 on the date indicated below.
